## Innocare-CC

InnoCare-C/C central station serves as an information center developed for bedside monitoring system. InnoCare-C/C central unit works as a real-time and simultaneous monitoring and control center of the parameters measured and calculated by InnoCare bedside monitors connected through Ethernet™ network.

More than 30 patient curves can be monitored simultaneously.

Control and setting of each bedside monitor is possible from the central unit. The software package operates under Windows operation system which makes it possible to create individually resized and placed windows.

The system fully supports curve and data archiving.

- Safe administration with different user levels
- Unlimited network building possibility
- Flexible menu setting
- Customizable interface
- 120-hour full disclosure storage of physiologic data
- Immediate access to information
- Remote control of each connected bedside monitor Innomed
